About The Royal Marsden Private Care at Cavendish Square

Private Care at Cavendish Square is part of The Royal Marsden's broader strategy to diagnose cancer faster and earlier by improving patient access to better and more rapid diagnostics.

At Cavendish Square patients have fast and direct access to world-leading and research-active consultants, as well as state-of-the-art diagnostic technology, in a modern and peaceful environment. The centre focuses on patients with suspected breast, skin, lung, gynaecological, urological, head and neck, haemato-oncology and gastrointestinal cancers.

In addition, patients seeking the very best private cancer treatment in the Harley Street district can do so safe in the knowledge that it is backed by the strictest safety standards and governance, usually only seen in the NHS.

Services at Cavendish Square

- Medical Day Unit with 12 systemic anti-cancer treatment chairs
- Outpatient consultation suite
- On-site pathology lab
- On-site pharmacy
- A minor procedures suite
- MRI
- CT
- Mammography
- X-ray
- Nasoendoscopy
- Colposcopy
- Ultrasound

Why choose us?

One-stop service with rapid test results
Where possible, we offer next day appointments and same-day scans, assessments and results. Our dedicated on-site pathology department can conduct blood tests with rapid turnaround times to support cancer diagnosis and the delivery of personalised treatment plans to patients.

The highest standard of safety and care
The Royal Marsden is rated 'Outstanding' by the Care Quality Commission and was ranked by patients as one of the best places in England to receive patient care.

Clinical excellence
The Royal Marsden's ground-breaking research has revolutionised the way we provide cancer treatment and care, extending and improving the lives of patients everywhere. With many of our consultants active in research, our patients can feel confident that their treatment and care is based on the latest advances in oncology led by world-leading experts.

Award-winning quality service
Patients are greeted and assisted throughout their treatment by our friendly, multilingual Guest Relations team.

Central London location
Patients will receive The Royal Marsden's best-in-class service in five-star surroundings within London's prestigious Harley Street Medical Area.

Mai Bottos and Dona Doku,
Deputy Matrons at Cavendish Square

Cavendish Square is part of The Royal Marsden NHS Foundation Trust, a world-leading cancer centre

The Royal Marsden is one of Europe's largest comprehensive cancer centres and is rated as one of the leading private patient units in the UK, delivering outstanding levels of patient care. We see and treat more than 60,000 NHS and private patients every year and more private cancer patients than any other UK centre.

As a specialist cancer centre, we have the clinical expertise, facilities and technology to provide the very highest levels of private cancer care. Every cancer is different, and our multidisciplinary teams consisting of world-leading cancer experts, provide patients with personalised and bespoke treatment plans.

Our cancer experts lead the world in their understanding of cancer types and sub-types. Through their work here they have pioneered many new cancer treatments that are now the standard of care worldwide. Working together, they continue to provide an exceptionally high standard of cancer expertise covering diagnosis, treatment, recovery and aftercare that very few hospitals in the world can match.

Clinical trials

Research is at the heart of so much of the work at The Royal Marsden, this includes clinical trials of promising new surgical, chemotherapy, radiotherapy, rehabilitation and nursing treatments. With more than 800 trials open, the Trust offers the largest number of cancer research trials to patients in England. These pioneering trials supported by The Royal Marsden, help us improve treatment and outcomes for patients.

We also work in partnership with several cancer research organisations and charities including our academic partner, The Institute of Cancer Research, London undertaking ground-breaking research into new cancer drug therapies.

Researcher, Anastasia Alataki

Layth Baqer, Guest Relations Manager, in the main reception at Cavendish Square

How to refer your patient

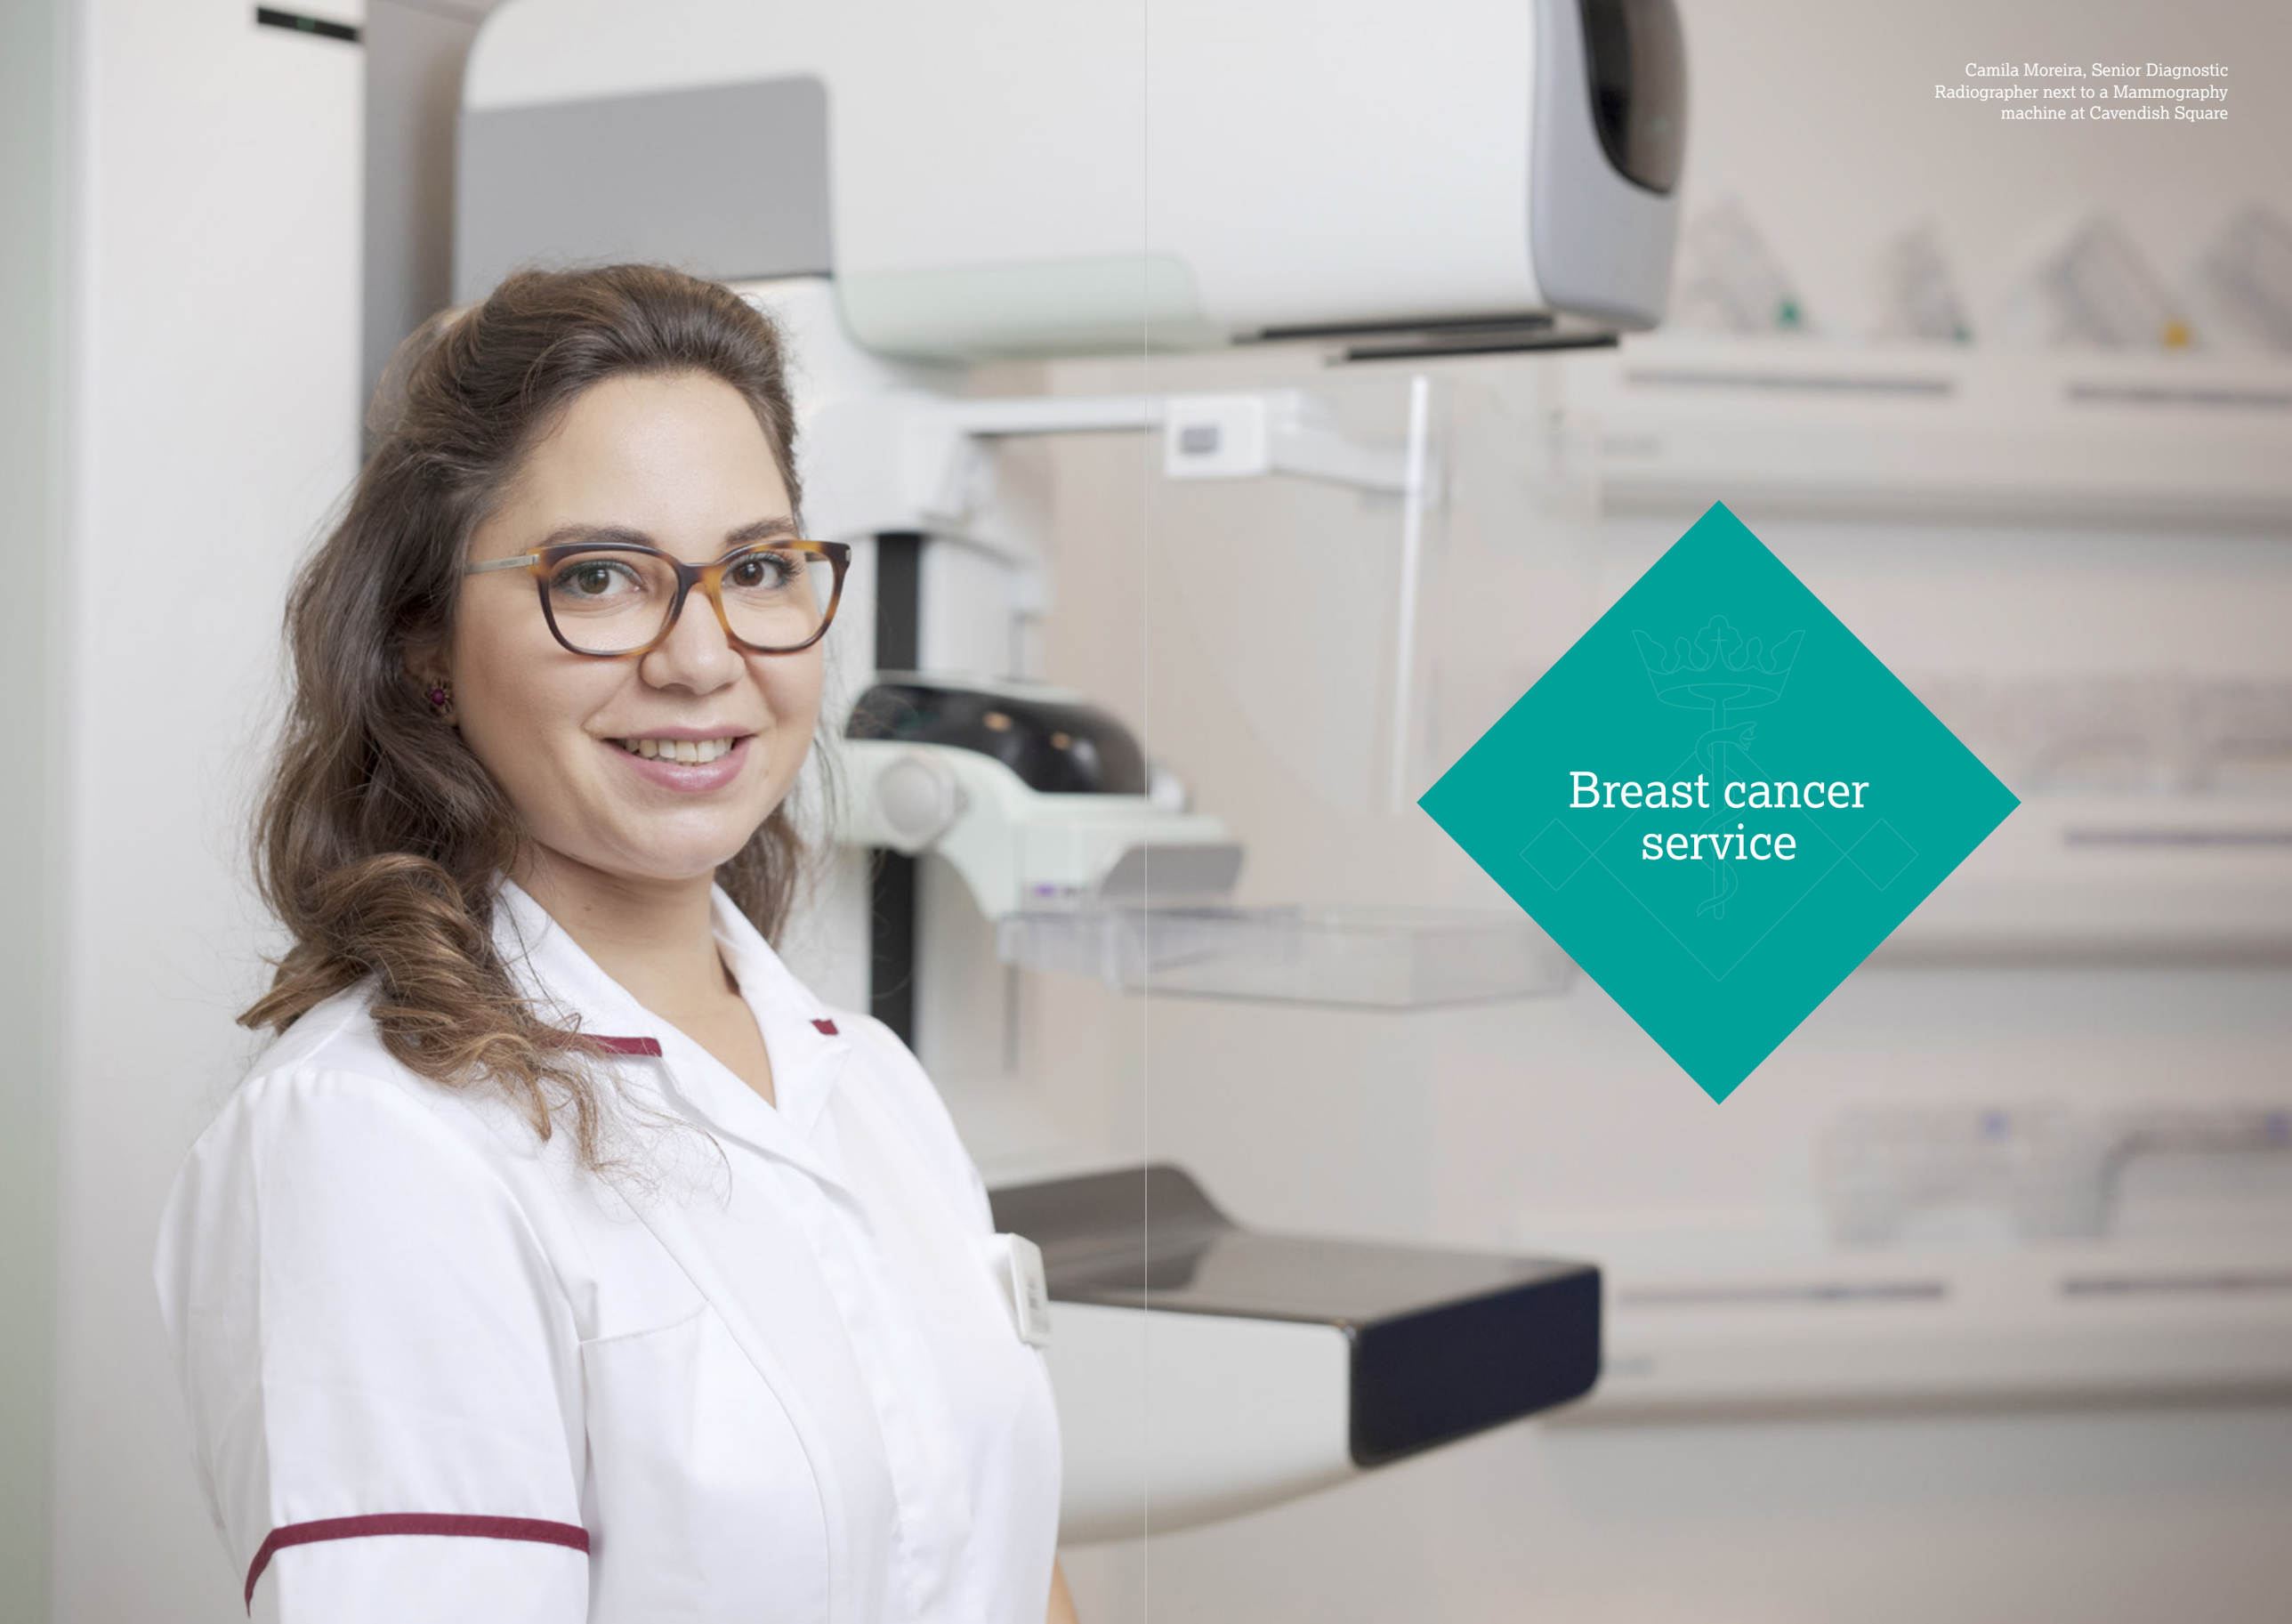

At Cavendish Square, you and your patients will benefit from The Royal Marsden's new GP fast-track referral service, which includes:

- **Additional capacity for private patient appointments**
- **Fast access for your patients**
- **Direct booking into consultant clinics**
- **Same day tests plus diagnostics outcomes and treatment plans***
- **Feedback on patients' consultation and treatment pathway**
- **Dedicated contact centre for fast appointment bookings**

* For some tests or more complex cases, this may take longer.

If you wish to refer your patient to The Royal Marsden Private Care at Cavendish Square for a consultation, diagnostic tests or treatment, call the **Private Care Contact Centre** on **020 7811 8111**, open Monday to Friday 8am–6pm, or email **privatepatients@rmh.nhs.uk**

Alternatively, you can visit **royalmarsden.nhs.uk/gp-private-referrals** for more information.

Rebecca Edwards, Principal Clinical Scientist in Pathology

Haemato-oncology cancer service

Haemato-oncology service

We can offer outpatient appointments and day case treatment with one of four highly experienced consultants from The Royal Marsden haemato-oncology department. Most investigations can be initiated or completed in Cavendish Square, though certain tests may need to be completed at our other Royal Marsden sites in Chelsea or Sutton.

Our specialist integrated haematological malignancy diagnostics service provides world-class expertise in the diagnosis, prognosis and monitoring of haematological malignancies, through multidisciplinary collaboration of haematologists, haemato-pathologists and scientists from The Royal Marsden.

The Royal Marsden's haemato-oncology unit contributes to nationwide research, shaping the way blood cancers are managed. Our leading haematology specialists diagnose and treat myeloma, all subtypes of leukaemia and lymphoma and other disorders such as myeloproliferative and myelodysplastic disorders. The Royal Marsden multidisciplinary, research-led approach improves patient outcomes.

Meet some of our specialist consultants

Dr Kevin Boyd

Specialist in myeloma and related disorders

Dr Dima El-Sharkawi

Specialist in lymphomas and CLL

Dr Mark Ethell

Specialist in leukaemia, lymphoma, myeloid disorders and treatments including stem cell and CAR-T therapies

Dr Mike Potter

Specialist in leukaemia, lymphoma, myeloid disorders and treatments including stem cell and CAR-T cell therapies

Conditions treated at Cavendish Square

- Lymphoma and Hodgkins lymphoma
- Non-Hodgkin lymphoma (all subtypes including DLBCL and follicular lymphoma)
- Chronic leukaemias such as CLL / CML
- Myeloma and other plasma cell disorders

- CT scan
- MRI
- X-ray
- Ultrasound
- Bone marrow testing
- PET scan*
- Biopsies*

Dr John Williams, Consultant in Anaesthesia and Pain Medicine

Pain management

Pain can be an unfortunate side effect of some cancers and cancer treatments. It is defined as being either acute or chronic and can have a serious impact on a patient's physical health or wellbeing.

Most cancer pain is manageable, and controlling it is a key part of a treatment plan. Our pain clinic at Cavendish Square offers a service to help manage the pain and find ways of coping for patients. The clinic works alongside other specialist units to help support patients during their treatment.

Meet some of our specialist consultants

- Occupational therapy*
- Psychological support*
- Acupuncture*
- Massage*
- Palliative care*

* These procedures will be carried out at our other hospital sites in Chelsea, London and Sutton, Surrey

Rebecca Edwards, Principal Clinical Scientist in Pathology

Cancer genetics

The cancer genetics unit offers services to patients of The Royal Marsden and their familes, who are concerned about a risk of inherited cancer.

Our aim is to promote cancer prevention, early detection and to help in some cases with management decisions. We assess personal and family history of cancer to decide whether it is likely that there is a hereditary cause. We use this assessment to decide whether a genetic test might help an individual to clarify their own risk, or make recommendations about additional screening that an individual may benefit from.
